

CSAH office space needs approximately 4000-5000 square feet:

- We are currently utilizing 13 offices and 8 cubicles.
- Office space should include a conference room with seating for at least 25 people (though a larger area for community wide trainings that we frequently facilitate would be ideal) and a separate break room.
- Staff bathrooms separate from client restroom facilities.
- Adequate parking for staff and guests.
- Office space to accommodate our “access and resource coordination center” - this configuration could be a large waiting or reception area with easily accessible restroom facilities for our clients.
- The open access and resource center would need a storage area easily accessible by staff for emergency comfort items for clients.
- We would install a security system with cameras for the public areas of the building.
- The outside parking area and building need adequate lighting for safety.
